Introduction

This document describes the steps to configure custom TABs in Cisco Jabber. These custom TABS allow a Cisco Jabber user to easily Logon or Logoff from their Cisco IP Phone, increasing UX (User Experience) and reachability and providing the user a simple interface within Cisco Jabber.
TABs in Jabber

When creating a custom TAB within Cisco Jabber it allows a user to add additional external functions or features to the Cisco Jabber client.
ALM can now be used to integrate with Cisco Jabber using these Custom TAB's.

To add a custom TAB, follow these steps:

1. In Cisco Jabber:
   Select File > New > Custom Tab

2. In the Create new custom tab dialog window, complete the following fields:
   a. Tab name:
      logon/logoff

b. Sample Page URL:
   Enter the following URL for the custom ALM tab.
   i. file:// C:\Program Files (x86)\ALM - Automatic Login Module\ALMLoginLogoutSample.html

In this example, we have already created a local content file which can be used. This Sample file is in the following directory:
C:\Program Files (x86) \ALM - Automatic Login Module

When pointing the custom TAB to this specific file a user can now easily logon or logoff from their Cisco IP Phone using ALM.

The ALMLoginLogoutSample.html is a standard html coded file and can easily be modified to specific customer or user's needs.

The used triggers are:

Alm:login → by using this trigger ALM will Login the user to the Phone
alm:logout → by using this trigger ALM will Logout the user from the Phone

These triggers can be used in other applications as well.
